It is really very, it's a little trouble to think what will happen 20 years, I've seen that all has been changed. And so it's really complicated to believe what will happen in the future. But certainly, I think that it will be not a problem only of methodologies and of technologies that are hard to be imagined. But also, I think that the university will change also in the contents of the programs that will be taught 20 years from now. Because all, some profession will be very different from now. Of course, the first thing I can imagine is to think of artificial intelligence applications, we have to tell the reality, but the thing that I really cannot imagine is what will happen with the... I'm an engineer. There will be engineers 20 years from now there will be studies on other topics that now are very common and I don't know what will be in the future. Probably, there will be more integrated programs. Also an engineer will need to improve his competencies with other technologies. Now in Italy we have engineering medicine, also in studies of ancient books and so on. So I think that we have to change. I still make my lessons with chalk and I think that in the future this will not be possible. Because probably also students will change and some other situation will change.

This is the main variation of universities.

Another important thing I think will happen, it will improve the cooperation between universities. Because just now we are trying with dual degrees, common programs, but a student that will work in every part of the world will follow programs that are taught from more than one university. And this will be possible in the future, I think that it will these characteristics will increase very much, But in the future will be more. Or this is that in the present, each university probably will specialize their activities in some in some topics more than. And with the competencies in all of the topics that you can imagine will be less issues than now. Smaller universities cooperating one with each other, cooperating in different countries. For example, now I have a research project, a capacity building project with the University of Kyrgyzstan, Mongolia. In the future, we can share our knowledge producing courses that will be taught contemporaneously in different countries from teachers that stay in different places. taught contemporaneously in different countries from teachers that stay in different places. Thank you.
