|0.00|> I think one of the most important demands from the students is the flexibility.<|17.60|><|17.60|> That means the students have the opportunity to build their own learning process.<|24.64|><|24.64|> This is something that I'm sure that will increase in the future, but focus is still with more importance related to the personalization. That means the students know the characteristics that they have and the skills that they have to improve their learning process, and probably they demand more personalization in the curricula, in the activities, in the learning activities, etc. Once I have not controlling that case, the demands of the students I'm sure will increase to have a more personalized teaching and learning process, in particular learning process. As I mentioned before, I think another thing that probably increase the demands is everything related to the soft skills or skills for employability.

0:01:16

More probably than in some areas than content because of course content is important and basic knowledge in that case, but the society is changing a lot and quickly and probably the students will demand these kind of skills, very important for employability like speak different languages or how to express one idea, or for instance, the partnership, or also things related to, for instance, the interculturality or et cetera.

0:01:48

These are the things that helps to the students in the new labor markets not to be more competitive in this labour market. Another thing that I'm sure that the students will demand in the future more than now probably is to have our curricula and also our educational models more related to sustainability, ecology, how to preserve our environment, etc. The way to have these contents and also in the way that the institution is organized and the institution provides the knowledge for the society.
