|0.00|> Yes, it's a very hard question. I'm not an expert in all those, you know, the concepts<|18.04|><|18.04|> of generation, you know, X, Y, Z, etc. But I suppose now we are, in 20 years we will get a completely new generation so called W if I'm not mistaken because I thought you know this concept of the generation and actually there are some key features and those people, they can communicate with all those new technologies very easily. They feel comfortable with artificial intelligence, for instance, because personally I'm very scared of it and I still don't use it. I mean For me, I just try to avoid it in my life, in my professional and personal life. However, all those new generations, they are gay. And that is why I think we need to think more about the new methodologies and new methods for teaching, etc.

0:01:36
And also I think this new generation, they are more concerned with the social environment and perhaps they are more socially responsible. I don't know, but I can see now in my students today that they also have more, they think we think more in comparison with my generation about the environmental issues, about the green technologies, about the future, etc. And I hope in 20 years, actually, we still will have this trend among young people. I mean, they will concern more about the environment. Yeah, I hope so. But again, they would be very different in terms of their attitude to new technologies. And that is why we need to think about ourselves. I mean, as a professor, as a teacher, I hope I will be teaching in 20 years also. But it means that I need to also try to adopt and learn more about everything. Because I need to understand them and how they actually consider it. And also, as far as I understand, there are a lot of people now, I mean the body etc. and physical life but also virtual life.

0:03:19
And it means that all of them they have like two lives, you know, in the real world and the virtual world. And you know, they even, they live there also, you know, buy some, you know, products, communicate with other people, etc. And that is why we need to think how to use also these specifics, how we can use this virtual world in the education as well.
